

To the Energy and Environment Specialty Group,
I am a PhD student (U. of Colorado, Boulder) gathering any and all geographers who are interested in the complex and pressing issues around the popular visualization of climate change. Specific issues include: how to map uncertainty for a public audience, the challenges of mapping impacts at a regional scale, issues of affect and framing of visual communication in public media, visual translations of science, and the use of interactive, multimedia cartography to present collective narratives on climate adaptation and mitigation. There will be an informal meeting for those interested in these subjects at the AAG meeting this spring in Boston, with aims to create a session for the AAG meeting the following year, plus open discussion of the intersecting research interests within this area. If interested please contact me at marjorie.holmberg@colorado.edu.

Don't hesitate to contact me with questions and comments as well.

Thank you!

Molly Holmberg
